Bimaruna Jaya's inbound and outbound data as charts, tables, and statistics. <ul style="list-style-type: none">Created the database structure in PostgreSQLUtilized Next JS as the frameworkDesigned the frontend with shadcn for efficiency and consistency	Oct 2024 - Present
UtacyLyrics - Cikarang, Indonesia	May 2024 - Jun 2024

Fullstack Developer

UtacyLyrics is a music web app that allows you to search for lyrics of your favorite songs. The app also provides the feature to romanize lyrics in native characters to the Latin alphabet. I made the app alone for my AI final project using React and Tailwind.

- Handled both frontend and backend systems
- Designed a minimalistic and dynamic UI
- Implemented the Genius and Gemini API

AkunImpact Outlook - Cikarang, Indonesia

Apr 2024

Fullstack Developer

AkunImpact Outlook is a financial analysis website developed for AkunImpact, leveraging recent transaction data. Collaborating with my group members, we built the site using Laravel. I handled the data of payment methods and payment handlers, displaying their total count and rank in a chart and graph.

- Managed the project using GitHub for version control and collaboration.
- Focused on implementing interactive charts using Chart.js library.
- Collaborated with team members to integrate the charts into the Laravel-based website seamlessly.

Eaterly - Cikarang, Indonesia

Nov 2023 - Dec 2023

Fullstack Developer

Eaterly is a group project made in Android Studio that aims to reduce long canteen queues at President University. This Point-of-Sale mobile app allows students to order and pay for food electronically, streamlining the process and reducing wait times. Eaterly aims to improve both the student experience and canteen efficiency. It is made with Kotlin and Firebase, and I was tasked with some crucial features during the development of the app.

- Created the registration page for users which separates logins for customers and sellers/vendors by utilizing the Firebase collection.
- Created the welcome page and form page for brand new sellers to register their counter to the database.
- Made a reusable image preview code for uploaded pictures, which were then used in my counter registration page and other features like adding menu.
- Created the home page for sellers that shows their counter name, description, and picture.
- Generated custom QR codes filled with table numbers using Python, allowing the main feature of the app to work.

Utacy - Cikarang, Indonesia

Apr 2023 - May 2023

Fullstack Developer

Utacy is a local music player web app I built myself using HTML, CSS, JavaScript, PHP, and MySQL. It lets users play their own music library stored on their device and has a user interface inspired by Spotify.

- Built responsive web interfaces with HTML & CSS.
- Built interactable music player assets like buttons, sliders, and volume control using JavaScript.
- Handled backend, creating the MySQL database structure and allowing the songs to be played and displayed through PHP.

Skills, Achievements & Other Experience
